## RE: Software Developer Summer Internship

I am eager to be considered for the software engineer internship with Snowflake Software which I learned about through my university careers fair. I believe that I am a strong contender for this opportunity as I am currently on track to achieve a 2:1 at the University of Southampton studying BSc Computer Science.

Here is a brief outline of the many personal and professional qualities, skills and competencies I will bring to the Snowflake Software:

- Developed and advanced key strengths in java programming, computer hardware and software engineering.
- Achieved a 1st grade of 81% in my foundation year in BSc Mathematics.
- Achieved a grade of 2:1 in my University java coursework.
- Analytical mind to solve complex problems.
- Knowledge of relational databases
- Experience with object oriented software design

I possess ambition, dedication and drive to fully succeed in this Snowflake Software internship role. My professional growth is tantamount to a long-term, rewarding career in Software Engineering and I cannot imagine a greater opportunity than this one with Snowflake. Please take a moment to review my attached resume and feel free to contact me for additional information.

Thank you, in advance, for considering my placement for the Software Developer Internship.

Sincerely,

Brody Walters
